AWAKEN YOUR SENSES

COMPANY STORY

THIS IS OUR STORY:

UandK Sound comes from the London University, the global center of art and design with profound history. The sterling sound brand and its creative, fashionable multi-media products have been conceived five years ago by a team of international audio/visual professionals with more than 20 years of experiences. All UandK Sound products use the philosophy of today's simple, modern yet sophisticated home design as our norm. In 2015, we launch our brand worldwide, including our specialty of home cinema system and media center for today's living room.

Since the early beginning UandK Sound engineers have redefined the design concept statements. The statement is sometimes part of a presentation that includes visual images or drawings of the space.

As the world changes, so do we. We do not know how the future is, but it will not stop us from shaping it. We will keep pushing the envelope with continuous innovations. And more importantly: we will make sure that we offer you the highest available technology to enjoy your favourite music. Just how our team wanted it.

“ WE STARTED IN A SMALL LABORATORY LOCATED IN LONDON. WE HAVE SCORED BIG AND ALSO, SOMETIMES, STRUGGLED TO REACH OUR GOALS. WE HAVE BEEN WORKING HARD TO OFFER OUR BEST SERVICE. WE HAVE IMPROVED AND GROWN. LOOKING AHEAD TO THE FUTURE, ALWAYS REMEMBERING WHERE WE COME FROM. ”

Our intention is to bring to your home the maximum enjoyment of the art in its fullest measure. Each UandK Sound design has been developed with one goal in mind: to offer the highest harmony inside your home environment as well as transmitting the purest audio fidelity. As a result, our products are capable of reviving your lost emotions without leaving your home. We want you to share and enjoy the blend of style, quality, performance and sophistication that makes UandK Sound unique.

UandK Sound manufactures high quality loudspeakers for home and commercial use. With an increasing range of new models, you have possibly already experienced the UandK Sound. Distributed throughout the world, UandK Sound has become a leading loudspeakers designer.

Utilising the last 3D modelling and computer simulated design technology, UandK Sound innovative research and development team are a pioneering force. Whether you are looking for your first pair of stereo loudspeakers or your own ultimate theatre experience, UandK Sound will exceed your expectations.

HOW TO GET INSPIRED

You imagine it, we make reality. We have passionate ideas about what is possible in this world. Our emotions lead us to create realities that expand our market and inspire those around us. The world most innovative loudspeakers are what we make enabling you to share your lifestyle through an amazing sound performance.

UandK Sound has a superb technology and its story is interesting and detailed, if not a little boring and static. Saying that, I could not imagine our team sharing their story in an interactive manner. It just would not suit what they do.

Once you feel that you have captured the essence of your idea, produce a rough outline on paper with more ideas relating to your main source.

Our passion to offer simply the best to all our loyal customers is a continuous commitment to grow faster than our competitors. Since its foundation UandK Sound has struggled to be internationally recognized thanks to the dealers support and the present audio shows being held in different countries.

COMPANY PHILOSOPHY

CONCEPT

UandK Sound has a strong sense of commitment with its acoustic and visual esthetics design. Naturally, their technical reliability and value are beyond our motto. Even the most innovative design is constantly improving so that UandK Sound builds progress into every product investing the effort to satisfy even the most discerning customer. That being so, we only offer the latest in audio technology for long term enjoyment.

We do not produce cheap loudspeakers and certainly we do not offer a poor sound. Fortunately, many thousands of audiophiles worldwide agree with our philosophy.

UandK Sound designs are easily integrated into your living room. Their full enjoyment should not require a complex installation. Either to watch a movie or listening to your favorite singer, UandK Sound brings to you an extensive catalog where young or elderly audio enthusiast can find the most suitable solution according to their preferences and possibilities without issue or compromise.

DESIGN

“Loudspeaker as an integral part of the environment”

A loudspeaker carries out the dual function of musical source and item of furniture in your home environment. UandK Sound design complies with conceptual style. It is the result of a continued integration between acoustic design and visual harmony. Just where the style and design imposed also define acoustic identity, or like a design element whose aesthetic value is judged by its coherence with its function.

The loudspeaker cabinet is of such fundamental importance that we drew inspiration from the construction concepts of some well known stringed instruments. This is how UandK Sound loudspeakers achieve their pure, natural and definitive acoustic timbre.

TECHNOLOGY

Investment in cutting-edge technology is our way to succeed. Before assembling the components are carefully selected and only those conforming to tightly defined tolerances are ultimately processed. The same care and attention is dedicated to the production of the crossover network, which along with the loudspeakers, is of fundamental importance to the quality of the diffusers.

Our extensive listening tests are a crucial part of the manufacturing process before each speaker and electronic are burned-in and thoroughly measured for several days. UandK Sound products advance to the final manufacturing step only if the measurements show no deviation. At the end, skilled, well trained ears test every component to ensure that everything is up to UandK Sound standards.

STYRENE RUBBER BOUNDARY

By using the latest styrene-butadiene rubber (SBR) process to give you the best in reflex presentation and balance in all measurement without overload or malfunction. The width of the rubber edge is carefully designed to give flexible dimension. It would not pull the drive in rapid motion not under load in slower motion. This will also avoid transmitting the reversed phase of sound waves thus generating any acoustic wave interference. By using the double R analysis double ring, this will achieve it's functionality without compromise.

CONE

The traditional low cone used today had already given a good sound quality, yet UandK Sound had designed methods and materials to give you even greater sound effect. We use significant materials to design the cone, thus achieving the best steel effect to produce greater efficiency. UandK Sound's middle unit took full advantage of welding the shell section to give you a greater penetrating and delicate sound.

COIL TUBE

The three usual materials used, KSV, TIL and ASV, produce different sound effect, yet they all act to assist the control and balance of the speaker. Because UandK Sound wanted a unique sound quality, we adapt the combination of the coil tube and cone to give you the best possible design in demand.

WAVELENGTH

UandK Sound uses the best elasticated conex to form the master wavelength by combining the high heat formula process. This would give you the elasticity require, and by using the R and triangular designs in support, the movement of the speaker is not compromised.

SPEAKER SHELL

- We use ladder effect design for all our speakers, thus wide at the front and narrow at rear. This design will reduce sonic repercussion and diffraction. This will give the speaker more clearer and detailed sound.

- Thinner wall layer not just give the speaker greater atmospheric compression, but also more dynamic driving force, and to give the speaker more transient effect at the same time.

“OUR GOAL AS ENGINEERS IS TO LET OUR CUSTOMERS ENJOY THE BEST AUDIO PERFORMANCE. THE PERFECTION DOES NOT EXIST UNTIL YOU FIND THE BEST MATCH BETWEEN ELECTRONICS

Enginner & Designer

CROSSOVER

- Using 12dB in design as well as implementing middle and high frequency impedance compensation process to balance the sound effect.

- To give an accurate spread of all different areas in the speaker, and using the best quality component in tune to produce the best sound field.

LIFE- STYLE

M3SERIES
M4SERIES
iSERIES

M3 SERIES

Modern, concise and truly integrated and styled into your family living room. Experience the true cinematic effect.

Our intention is to bring to your home the maximum enjoyment of the art in its fullest measure. Each UandK Sound design has been developed with one goal in mind: to offer the highest harmony inside your home environment as well as transmitting the purest audio fidelity.

At the end, skilled, well trained ears test each component to ensure that everything is up to UandK Sound standards. As a result, our affordable M3 Series are capable of reviving your lost emotions without leaving your home.

M4 SERIES

Worry about your living room audio and visual products and fittings? Still wondering how to create that unique cinema sound? Still cannot find that ideal theater performance in your living room? M4 Series from UandK Sound might just be your solutions! The concise and modern design, the colorful styling, the precise sound field positioning and the surging low frequency effects of these units will allow you the experience of the true home cinema effect!

A loudspeaker carries out the dual function of musical source and item of furniture in your home environment. M4 Series complies with conceptual style. It is the result of a continued integration between acoustic design and visual harmony. Just where the style and design imposed also define acoustic identity, or like a design element whose aesthetic value is judged by its coherence with its function.

The loudspeaker cabinet is of such fundamental importance that we drew inspiration from the construction concepts of some well known stringed instruments. This is how M4 Series achieve their pure, natural and definitive acoustic timbre.

iSERIES

IT'S ALL AT YOUR FINGERTIPS !

New generations are always looking for an innovative way of listening music through their iOS and Android devices instead of using a conventional HiFi system.

i6 features provide you the best high quality wireless transmission. Meanwhile, Bluetooth is the handiest and most broadly compatible wireless standard.

The wireless streaming technology brings all the music from your mobile device to your UandK Sound loudspeakers at home. You can finally enjoy your music out loud, with family and friends, in every room of your house. Stream your own content, or choose from a variety of leading global music services.

i6 Series are the best choice for those who are keen on listening music without complexity. Even elderly music lovers will fall in love thanks to its simplicity and excellent sound performance.

HOME CINEMA

M6SERIES
M8SERIES

M6 SERIES

ULTRA THIN!

Can be wall mounted or flush to the wall. Custom design for cinematic experience.

Our M6 Series have a strong sense of commitment with its acoustic and visual esthetic design. Naturally, their technical reliability and value are beyond our motto. Even the most innovative design is constantly improving so that UandK Sound builds progress into every product investing effort to satisfy even the most discerning customers. That being so, M6 Series only offer the latest in audio technology for long term enjoyment.

M6 Series design is easily integrated into your living room. Their full enjoyment should not require a complex installation. Either to watch a movie or listening to your favourite singer, UandK Sound brings to you an extensive catalog where young or elderly audio enthusiast can find the most suitable solution according to their preferences and possibilities without issue or compromise.

M8 SERIES

Investing in cutting-edge technology is our way to succeed. Before assembling M8 Series components are carefully selected and only those conforming to tightly defined tolerances are ultimately processed. The same care and attention is dedicated to the production of the crossover network, which along with the loudspeakers, is of fundamental importance to the quality of the diffusers.

All models are three-way design. Its separate low, medium and treble use 12dB/OCT divider, thus making the sound more clean, more precise in positioning. The cabinet is designed according to movie sound output mode, fully airtight, in two main down box acoustic design and with dynamic surging thus creating more rapid and accurate sound. With carefully selected brand of Vifa from Denmark, and by using high quality speaker units, therefore given more expressive sound.

The power of the subwoofer with its unique 1600W output power, this will give out a true and immersive experience. The subwoofer is also equipped with EQ room regulation and can be placed randomly.

Our extensive listening tests are a crucial part of the manufacturing process before each speaker and electronic are burned-in and thoroughly measured for several days. M8 Series advance to the final manufacturing step only if the measurements show no deviation.

M

SERIES

M7300

M2300

M SERIES

M7300 | M2300

M7300 uses category A line, having no crossover distortion, therefore the entire frequency range can be at very low level, especially at high frequency level. The sound quality of this unit is meticulously precise, especially the pure DC coupling, through the input of the amplifier and the design phase output. All these in combination will give you a real and live hearing experience.

The circuit of both professional power amplifiers is fully balanced, and all components are also chosen carefully throughout. The noise level can be as low as -105dB, up to a dynamic range of 120dB, therefore we can deem this as a non-destructive amplified power amp. When in use, the audio signal in the speaker can hardly be heard.

Each channel is equipped with a separate transformer and power supply circuit, ensuring a high degree of separation and avoiding any crosstalk between respective channels throughout the frequency

range, even up to or more than 80dB. String sound level is also lower than most general background noise amplifier. Regardless of the cost of construction, we deemed to eliminate the problem of any multi-channel ground loop noise arising from the exchange section so that the users can experience the real audio and visual effects.

With exceptional clarity and dynamics, the M7300 and M2300 Series can create a huge soundstage that is almost holographic in its width and depth. From the most intimate acoustic recording to full-scale orchestral works, the performance is perfectly placed and never feels limited.

Combine our multichannel power amplifier with the M2300 Series and you will get an awesome combination ready to set up any complex home theater configuration.

TECHNICAL SPECIFICATIONS TIONS

M3SERIES

MODEL	M310
IMPEDANCE	4 OHM
FREQUENCY RANGE	70-22000 Hz
POWER	60-120W
SPL	87 dB +/- 1.5 dB
SIZE	178 x 173 x 100 mm
WEIGHT	2,07 kg
COLOUR	WHITE LIGHT

MODEL	M320
IMPEDANCE	4 OHM
FREQUENCY RANGE	60-22000 Hz
POWER	80-160W
SPL	88 dB +/- 1.5 dB
SIZE	178 x 315 x 100 mm
WEIGHT	4,28 kg
COLOUR	WHITE LIGHT

MODEL	M410
IMPEDANCE	4 OHM
FREQUENCY RANGE	60-22000 Hz
POWER	80-160W
SPL	88 dB +/- 1.5 dB
SIZE	230 mm (D)
WEIGHT	4,85 kg
COLOUR	RED / WHITE

MODEL	M8I
IMPEDANCE	4 OHM
FREQUENCY RANGE	40-250 Hz
POWER	200-400W
INPUT VOLTAGE	120 / 230 V
SIZE	400 mm (D)
WEIGHT	20,37 kg
COLOUR	RED / WHITE

MODEL	M330
IMPEDANCE	4 OHM
FREQUENCY RANGE	60-22000 Hz
POWER	80-160W
SPL	89 dB +/- 1.5 dB
SIZE	500 x 173 x 100 mm
WEIGHT	4,82 kg
COLOUR	WHITE LIGHT

MODEL	M800II
IMPEDANCE	4 OHM
FREQUENCY RANGE	40-250 Hz
POWER	200-400W
INPUT VOLTAGE	120 / 230 V
SIZE	500 x 330 x 180 mm
WEIGHT	12,61 kg
COLOUR	WHITE LIGHT
