CRAFTED FOR CINEMA. BUILT FOR IMMERSION

UandKSound was founded on one simple belief: exceptional home theatre should be experienced and felt, not merely heard.

The foundations of the brand were established back in the early 2000s, when a specialist engineering and management team began pursuing a long-term ambition to create a new standard in high-performance home theatre.

Years of market development, customer insight and technical refinement followed before the launch of UandKSound in 2013, at a time when the global home theatre category was entering a period of rapid evolution.

From the beginning, the ambition was never simply to manufacture loudspeakers. The goal was to design complete cinematic experiences that combined professional acoustic performance, meticulous standards of engineering and well-considered architectural integration.

Today, UandKSound remains dedicated to its founding principle: to create high-end home theatre experiences that would utterly immerse their owners in the worlds they created.

02

THE PURSUIT OF BETTER SOUND

UandKSound firmly believes the value of a brand extends far beyond commercial success. Every product is developed with the conviction that outstanding engineering creates more meaningful experiences, transforming the way people watch, listen and connect with entertainment at home.

This philosophy continues to shape every decision the company makes. Three principles guide the brand:

Customer First

Products are designed around real-world installation requirements, and prioritize the long-term ownership experience.

Technology First

Continuous investment in acoustic development, product engineering and innovation drives ongoing improvement.

Quality First

From component selection to final testing, every stage of development is focused on delivering reliable, professional reference-level theatre performance.

Rather than chasing trends, UandKSound remains focused on continual, steady innovation and long-term product excellence.

FOUNDED ON EXPERIENCE

In 2009, UandKSound Chief Design Officer, established an audio design studio dedicated to exploring the relationship between acoustic performance and refined industrial design. It went spectacularly well, resulting in a slew of contracts to design, engineer and build high-specification products for globally renowned loudspeaker brands, such as M&K, Polk Audio and Canton.

Collaborating with such high-profile international audio manufacturers allowed UandKSound staff to rapidly accumulate a deep insight into both the professional sound and consumer audio categories.

Encouraged by his success, UandKSound management guru decided to leverage his expertise and founded UandKSound as an independent brand in 2013. Why was that name chosen? Well, having previously worked with several British brands, including B&W, UandKSound Chief Design Officer developed a real affinity for the particular sonic balance and engineering that such brands strove for. In naming his new venture UandKSound, he wanted to lay down a clear marker for the consistently high standards that it would aspire to in the years to come.

Following a period of rapid growth, José Javier Husillos Pulido joined the brand as International Sales & Marketing Director a couple of years later, when the company expanded into Spain. The partnership brought together an impressive combined level of expertise in acoustics, global market development and electronic product design.

Their shared vision and philosophy continues to define the UandKSound of today, with a firm, guiding conviction that precision engineering and industrial design should never exist in isolation.

03

DESIGNED FOR THE DEDICATED HOME THEATRE ENTHUSIAST

UandKSound primarily serves two audiences: discerning end-users building premium entertainment spaces, and professional distribution and integration partners delivering those experiences around the world. Its solutions are designed to slot into two primary applications:

- Dedicated private theatre rooms, where reference-level performance and immersion are the primary criteria
- Domestic home theatre environments, where performance, design and integration must co-exist along day-to-day family needs.

Across both scenarios, the objective remains the same – to deliver emotionally engaging, cinematically immersive sound, but without sacrificing aesthetics or installation practicality.

A FOCUSED PRODUCT PHILOSOPHY

Unlike brands that spread themselves too thinly across multiple categories, UandKSound has always maintained a single-minded focus on home theatre.

Its current portfolio includes the E6, C6, C8, M5, M6, M8 and Reference Series platforms, alongside the i-Series (developed at the request of customers, to meet the need for smaller-scale, contemporary living room theatre and digital entertainment solutions). Lastly UandKSound designed the M4500D class D power amplifier. It represents the best in engineering ingenuity and available electronic components. With an extremely high damping factor and the ability to deliver huge currents the class D technology effortlessly controls any loudspeaker, being the best partner for our flagship Reference Series.

The recently introduced C Series reflects this philosophy particularly clearly.

Developed for the custom installation market, C Series loudspeakers were created to solve a challenge frequently faced by integrators and homeowners alike: achieving professional acoustic performance, elegant design and efficient installation within a single solution.

The result is a platform engineered around three priorities:

Acoustic Performance

Wide dynamic capability, precise detail retrieval and immersive cinematic reproduction.

Architectural Design

Minimalist styling and discreet integration informed by balanced proportions and contemporary interiors.

Installation Efficiency

Compatibility with common European and North American wall-types, to simplify initial specification for projects and to reduce installation time.

Features including class-leading high-frequency dispersion, rotatable HF driver configurations, refined crossover design, and installer-friendly mounting systems that help to guarantee that each installation will perform as intended.

GLOBAL REACH, LOCAL EXPERTISE

UandKSound initially expanded into Spain, but now serves an ever-growing global customer base from its base in China and Europe, both hubs spans North America, Asia, Europe, and the Middle East.

The growth of the brand has been achieved not only by rigorous product development, but also by forging strong relationships with professional partners worldwide and some manufacturers cooperation to supply ODM (Original Design Manufacturer) products. Through ongoing technical education, service support and close collaboration with distribution channels, UandKSound enables its local partners to deliver consistently high standards of installation and customer experience.

LOOKING AHEAD

UandKSound's long-term vision is clear: to continue delivering meaningful advances in the home theatre category through focused innovation, disciplined product development and a commitment to exceptional user experiences.

Future growth will be supported through expanded global partnerships, participation in leading industry exhibitions, investment in customer advocacy and the continued development of benchmark theatre projects around the world.

Because for UandKSound, creating great sound isn't the destination.

It is where the experience begins.

CUSTOM SERIES C8 Series

Designed to address compromise

Every product development program begins with at least one key question.

For UandKSound, the challenge it conceived the C Series to overcome was straightforward: why should integrators and homeowners ever have to choose between exceptional sound, architectural design and installation efficiency?

The harsh truth is that across the global custom installation market, solutions prioritize one aspect at the expense of another. For instance, high-performance loudspeakers can make many greater demands than less ambitious ones, particularly when it comes to installation complexity.

Architecturally discreet products, on the other hand, may make acoustic compromises in order to look as good as they do.

Similarly, simpler installation platforms can also often be more limited when it comes to their ultimate overall performance levels.

The C Series was developed to eliminate the need to juggle those compromises.

From the outset, the objective was not to create just another in-wall loudspeaker platform, but to engineer a complete architectural audio solution capable of delivering cinematic performance, refined aesthetics and practical installation... in equal measure.

CUSTOM SERIES C6 Series

Born out of experience

The C Series is not a product line that has been created in as a knee-jerk response to short-term market trends.

Instead, it represents the natural evolution of our long-standing product philosophy – combining sound quality, aesthetics and usability into a single integrated solution. As a result, we anticipate its 'shelf-life' will be way longer as a result.

By undertaking extensive evaluation and continuous refinement throughout the development process, we have helped shape and fine-tune every aspect of the range, from acoustic tuning and cabinet architecture, to installation methodology and visual design.

Early market interest and engagement from our international partners confirmed that our approach would address a genuine need within the custom installation category.

CUSTOM
SERIES

E Speakers

The sound of invisibility

Our new E Series features allow UandKSound a fresh standard in acoustic performance for in-wall and in-ceiling applications.

Designed for those seeking the world's most articulate and dynamic multi-channel home theatre systems, or simply a stealthy 2-channel system, the E Series speakers are voice and timbre matched with one another, as well as the rest of the UandKSound products.

All models feature an ultra-low profile, micro perforated grille, which are also paintable for a near invisible integration into any wall or ceiling and firmly attach via neodymium magnets. E Series also include extra wide threaded screws for quick dog leg fastening. The magnetic system secures grilles easily into place, reducing the risk of warping or damage during installation.

Some of the key features include our Smooth Visual Flangeless System, PRX™ Poly Resin CrossPoint Molds, PRX™ dog legs, Never Rust™ grills firmly attached with neodymium magnets and extra wide threaded screws for quick installation and push gold plated binding posts.

Sound architects

It is not easy to find a design that identifies us, but we do not like to be the same as the competition. All our loudspeakers have been created to be an integral part of the home decoration. This has been so, since UandKSound was born, with the aim of reliving the experience of feeling like one more protagonist of the seventh art, hand in hand with the best sound experience. Commercial movie theatres have undergone continuous technical improvement in recent years in conjunction with recording media. However, there is no doubt that everything can be improved and that is where UandKSound is positioned.

Since 2018, we have designed high-performance loudspeakers such as the successful M6 series, which is easily integrated into all kinds of environment and interior decoration. However, in our quest to seek perfection and integrate the best technology, design, and quality, we have advanced one step further in perfection.

For us, perfection can only be defined in one way; 'reference', recognised as the example by which others follow, in their quest to be the best. Having our own identity is achieved through the most advanced designs developed jointly with the greatest integration experts.

Every corner, curve and detail of the loudspeaker is meticulously studied to combine the pieces of the UandKSound DNA with one another in harmony and colour. Perfection and elegance are the hallmarks that make it a benchmark for other brands that work on a unique and unrepeatable design.

CINEMA
SERIES

M8 Speakers

State of art redefined

After intensive studies UandKSound has implemented a fresh step to renew its flagship reference models. As previous, M8 Series components are carefully selected and only those conforming to tightly defined tolerances are ultimately used. The same care and attention is dedicated to the production of the crossover network which, along with the loudspeakers, is of fundamental importance to the quality of the diffusers.

All models are three-way design. Its separate low, medium, and treble use a 12dB/OCT divider, thus making the sound more clean and more precise in positioning, thanks to the newly developed tweeter. Some UandKSound tweeters now use Air Motion Transformer Technology to make the sound 'leap' forward. A new extra slim body cabinet for M850-N is redesigned to be adapted to any custom installation. With care we have selected our components and, by using high quality speaker units, achieved a more expressive sound.

The power of the new M1500-N subwoofer has been improved. With its unique 1200W output power, our new subwoofer delivers a true and immersive experience. The subwoofer is also equipped with a class D amplifier, and EQ room regulation and can be placed randomly.

Our extensive listening tests are a crucial part of the manufacturing process before each speaker and electronic component is 'burned-in' and thoroughly measured for several days. M8 Series products advance to the final manufacturing stage only if the measurements show no deviation.

CINEMA
SERIES

M6 Speakers

Slim as our motto!

Following a similar concept to our M8 Series, the new M6 Series can be mounted on, or flush to the wall. UandKSound has recently designed an extra slim cabinet for utilisation in complex custom installations.

Our main innovation to deliver the best sound is the introduction of our legacy Air Motion tweeter. More precise and clean high frequencies are achievable, such that the M6 Series has an unprecedented sense of commitment with its acoustic performance and aesthetic design. Naturally, the technical reliability and value are beholding of our normal standards. Constantly improving even its most innovative designs, UandKSound builds evolution into every product, investing the effort to satisfy even the most discerning customer. That being so, the M6 Series only offers the latest in audio technology for long term enjoyment.

M6 Series speakers are easily integrated into daily life. Their full enjoyment will not require complex installation and, whether watching a movie, or listening to your favourite artist, M6 Series speakers bring an experience without issue or compromise, thanks to best value for money features.

M5 Speakers

Beautiful design is
the meaning of perfection

There is no greater comfort than sitting on the sofa to watch a movie or listen to music in the most relaxing environment. We are constantly working to provide the best listening experience and create the same feeling of a live musical or film performance.

UandKSound knows the importance of feeling good at home surrounded by a pleasant environment where everything maintains an aesthetic coherence. We have always been keen to design products with a dual purpose, functionality, and aesthetic appeal.

Fashions change and adapting to them is very important. For this reason, we developed the new M5 series, an evolution of the successful M3, but adapted to more discerning domestic environments where, not only aesthetics prevails, but an avantgarde sound reproduces high-resolution audio from the best films and music recordings. M5 Series speakers are engineered with great care to incorporate their visual presence in your interior.

The result is a refined entertainment experience without disrupting the beauty of your surroundings. All our products and components are proudly designed in Europe and our skilled and well-trained engineers test every component carefully.

Audiophile Performance

The new internal components for the M5 series include an improved crossover that provides excellent linear response through a high-density structured cabinet to get an outstanding dynamic range, especially for home theatre applications. Our renowned Air Motion ribbon tweeter is already implemented in many of our loudspeakers like the M5 series. A more defined response and extended high frequency is only achieved with the most advanced components.

The interior structure of M5 Series speakers has been developed in such a way that parallel surfaces are avoided to achieve a better sound diffraction, thus offering less distortion with high sound pressure levels.

The M5 Series family consists of front, centre, and surround channels, also, a dedicated active subwoofer. Making this family of products the perfect complement of loudspeakers, you get to enjoy the best sound at home without the need for complex installations. Our timeless design experience will be the best guarantee for you to enjoy sound in harmony without disruption to your home decoration for a long time.

HOME SERIES i Series

Wireless Home Theater package

While everybody appreciates the sonic benefits of a high-performance home theatre system, it's also true that some potential customers can't, or simply won't contemplate installing in-wall or on-wall speakers in every location, or perhaps need a less complex system for secondary rooms. To address such needs, uandksound has developed a completely new concept – the innovative i3 cinema, a Wireless Home Theater package unlike any other.

Comprising three, 5G Wi-Fi-enabled elements – a 7.1.2-channel capable decoder/transmitter box, five active in-ceiling speakers, and a powered subwoofer – the i3 cinema package includes everything needed to discreetly deliver reliable, room-filling multi-channel surround sound, or stereo audio, into virtually any room, with the absolute minimum of installation disruption.

For instance, the i cinema 200 wireless ceiling speakers (equipped with 75W in-built amplifiers and 2-way, co-axial drivers) fit into a standard 96mm-98mm cut-out, and come with individual mains power adapters. DIP switches located on their rear panels allow them to be assigned as either Front Left, Front Right, Centre, or Rear Left/Rear Right channels before installation depending on their location.

Signals to the speakers are sent via Wi-Fi from the remote-controlled decoder/transmitter box, the control hub of the system. Capable of creating a virtualized 7.1.2-channel soundfield, this attractively styled device features two HDMI inputs for video sources, as well as a digital optical input, partnered by a single HDMI output for a flatscreen TV.

For music playback, the box features an in-built Bluetooth receiver, to allow direct audio streaming from smartphones, as well as a 3.5mm aux input. While the i3 cinema is primarily designed to work as a standalone system, the provision of RS-23 control also allows it to be integrated into a wider control eco-system.

The final part of this fuss-free home theatre solution is the immensely capable i sub 500 wireless subwoofer. Powered by a 600W (RMS) in-built amplifier, it incorporates a wireless receiver that amplifies low frequency audio signals sent to it from the decoder/transmitter box. Topped with a practical, toughened glass plate capable of carrying a 100kg load, the subwoofer features an upfiring driver, along with an ingenious acoustical labyrinth (i.e. transmission line-style) design. The combination helps deliver an unexpectedly well-extended, low-frequency response, from what is a relatively compact enclosure.

Offering the potential for very swift and straightforward installation, as well as easy set-up, uandksound's capable i3 cinema Wireless Home Theater package ticks a lot of boxes, for both installers and customers. When it comes to delivering an uncompromised immersive sound experience, with the minimum of fuss, there's little that can touch it.

M SERIES

M4500D

M SERIES M4500D

Effortlessly controls any loudspeaker

Our new class D power amplifiers represent the best in engineering ingenuity and available electronic components. With an extremely high damping factor and the ability to deliver huge currents the class D technology effortlessly controls any loudspeaker being the best partner for our flagship Reference Series. 750 watts for channel for M4500D and 300 watts for M7300D, with bridgeable option just for M4500D, guarantees the best sound performance of the market. Even loudspeakers with very low impedance are no match for the unflappable power supply of our power amplifiers.

Perfect for any setup

The M4500D power amplifier can function in a traditional stereo or multichannel setup because of the bridgeable option. If your connected device has a 12V trigger output, this can control the power state of the M4500D and M7300D, and even daisy-chain several M4500D or M7300D power amplifiers for complex installations.

Benefits of true digital amplification

M4500D and M7300D are not a typical Class D power amplifier. Our technology utilises a combination of high current output MOSFET's with Class D the efficiency. The units have very low distortion and an excellent signal to noise ratio, making them the perfect amplifier on the market.

UandKSound solution offers noiseless and clear replay at all sound levels. The digital signal drives the loudspeakers directly, with no translation and no middleman offering a digital to analogue conversion, virtually perfect for the most demanding audiophiles.

The result is a level of effortless power and advanced processing not available from any other manufacturer. You can be sure that our technology will deliver the most enjoyable and neutral sound you have ever experienced.

COLOUR	White gloss

M520 LR

FREQ. RESPONSE	40-250Hz
WOOFER TYPE	Coated paper
WOOFER SIZE	10"
MAX POWER	400W
ENCLOSURE	bass reflex/MDF
SIZE	324 X 363 X 324 mm
WEIGHT	13.53 kg
COLOUR	White gloss

M530 C

IMPEDANCE	4 OHM
FREQ. RESPONSE	50Hz-22kHz
POWER	80-160W
SPL	88 dB +/- 1.5 dB
WOOFER SIZE	2x4"
SIZE	495 X 190 X 180 mm
WEIGHT	5.9 kg
COLOUR	White gloss

HOME SERIES
i Speakers

i3 cinema

INPUT	AC 100V-240V 60/50HZ
WOOFER OUTPUT	50W (4 ohm), <1% THD
TWEETER OUTPUT	15W (8 ohm), <1% THD
SPEAKER UNIT	1x3.5" 2 way coaxial
TWEETER UNIT	1x1" 13mm neo-magnetic
RESOLUTION	>65dB
SUB INPUT	AC 100V-240V 60/50HZ
OUTPUT POWER	500W, <1%THD
WOOFER UNIT	1x10", 4 ohm
FREQ RESPONSE	20HZ-110HZ
SENSITIVITY	200mV
DISTORTION	<0.5% (1W, 100HZ)
SN RATIO	>90dB
KARAOKE	Microphones x2

M SERIES

M Series

M 4500D

FREQ. RESP.	20Hz-20KHz +/-0.5dB
POWER OUTPUT	750W/4ohm
DC offset	less than 10mV
THD	<0.01% at 20Hz-20KHz
SNR	>110dB
POWER REQUIREMENT	2300W
INPUT SENSITIVITY	0.775/1.55V
INPUT TERMINAL	4xXLR
SIZE	482 x 400 x 108 mm
WEIGHT	11 kg
COLOUR	Black

Dolby Atmos Home Theatre configuration
equipped with UandkSound M8, M6 loudspeakers
